User manual for running simulation Widget

Link to application - https://simulation.geminisolutions.com/

Introduction -

This widget is intended to perform cyber simulation under a corporate domain. Below are the pre-requisites to be followed before using this application -

- Registration is mandatory to carry out the simulation
- User should have a valid email address in order to run the simulation --> This email address will act as from/sender email address
- User should have a handy list of all the email addresses (recipient email) for which simulation has to be run --> File format is csv with no headers, one email address per line

Note – **Sender email password should be a (spring boot) app password**. To generate the same, go to -

My account (Gmail)--> security --> Signing in to Google --> App passwords (generate one for the

simulation)

Registration/Sign in module-

This application comes with a feature of session management where a user needs to register to this application in order to verify the result and carry out the required task.

Steps to register -

- Click over widget link to access the application
- Go to the signup page and fill in all the required details
- On submission, the user gets a prompt that registration is successful
- Now you are all set to log in and run the campaign

Steps to run a simulation -

- Once logged in, Select the create campaign option (top right corner)
- Select the required template and fill in all the details
- Upload CSV file
- Check the preview
- Submit the details by clicking on send campaign

You can log in after some time to check the results. Results may take some time based on the number of email Ids being addressed

Tips - On average around 250 emails are being sent in an hour
